This volume contains papers presented at the 11th International Conference on Jet Cutting Technology, held at St. Andrews, Scotland, on 8-10 September 1992. Jetting

techniques have been successfully applied for many years in the field of cleaning and descaling. Today, however, jet cutting is used in operations as diverse as removing cancerous growths from the human body, decommissioning

munitions. The

diversity is

reflected in the

papers presented at

the conference. The

papers were divided

into several main

sections: jetting

The Clean Water
Act (CWA)
requires that
wetlands be
protected from
degradation
because of their
important ecological

Bobcat 331

functions including maintenance of high water quality and provision of fish and wildlife habitat.

However, this protection generally does not encompass riparian

areas â €"the lands bordering rivers and lakes â €"even though they often provide the same

functions as

wetlands. Growing
recognition of the
similarities in

wetland and riparian
area functioning and
the differences in
their legal

protection led the
NRC in 1999 to
undertake a study
of riparian areas,
which has
culminated in

Bobcat 331

Riparian Areas:
Functioning and
Strategies for
Management. The
report is intended
to heighten
awareness of
riparian areas
commensurate with
their ecological and
societal values. The
primary conclusion
is that, because
riparian areas

Bobcat 331

perform a
disproportionate
number of biological
and physical
functions on a unit
area basis,
restoration of
riparian functions
along
America's
waterbodies should
be a national goal.

father of the "land ethic," once said,

"The time has come for science to busy itself with the earth itself. The first step is to reconstruct a sample of what we had to begin with."

The concept he expressed â €" restoration â €" is defined in this comprehensive new volume that

examines the
prospects for
repairing the

damage society has
done to the nation's
aquatic resources:
lakes, rivers and

outlines a national
