"The publication of the second edition of this manual comes at an important juncture in the history of clinical research. As advances in information technology make it possible to link individuals and groups in diverse locations in jointly seeking the answers to pressing global health problems, it is critically important to remain vigilant about moral and ethical safeguards for every patient enrolled in a trial. Those who study this manual will be well aware of how to ensure patient safety along with fiscal responsibility, trial efficiency, and research integrity." —Robert Harrington, Professor of Medicine, Director, Duke Clinical Research Institute, Durham, North Carolina, USA The Duke Clinical Research Institute (DCRI) is one of the world's leading academic clinical research organizations; its mission is to develop and share knowledge that improves the care of patients around the world through innovative clinical research. Designed for investigators, research coordinators, CRO personnel, students, and others who have a desire to learn about clinical trials, this manual begins with an overview of the historical framework of clinical research, and leads the reader through a discussion of safety concerns and resulting regulations. Topics include Good Clinical Practice, informed consent, management of subject safety and data, as well as monitoring and reporting adverse events. Updated to reflect recent regulatory and clinical developments, the manual reviews the conduct of clinical trials research in an increasingly global context. This new edition has been further expanded to include: In-depth information on conducting clinical trials of medical devices and biologics The role and responsibilities of Institutional Review Boards, and Recent developments regarding subject privacy concerns and regulations. Ethical documents such as the Belmont Report and the Declaration of Helsinki are reviewed in relation to all aspects of clinical research, with a discussion of how researchers should apply the principles outlined in these important documents. This graphically appealing and eminently readable manual also provides sample forms and worksheets to facilitate data management and regulatory record retention; these can be modified and adapted for use at investigative sites.

The Institutional Review Board (IRB) is responsible for the review of a wide variety of clinical research. As the complexity of clinical research has grown over the years, the duties and responsibilities of the IRB have grown increasingly complex. This complex environment demands that the IRB be staffed and managed by professionals. As a part of affirming the professionalism of IRB staff, administrators and directors the Public Responsibility in Research and Medicine (PRIM&R) provides an important forum for education and affirmation of ethical standards for the performance and management of clinical research. An important component of this program is the certification exam known as the CIP (Certified IRB Professional). This examination, which is offered twice a year, covers a wide range of regulatory topics. This workbook provides one tool for the preparation and study for the CIP examination. The book addresses the key issues in federal regulations outlined in statutes including Title 45 part 4 (Protection of Human Subjects) , Title 21 part 50 ( Protection of Human Subjects), Title 21 part 56 (Institutional review Boards) Title 21 part 54 (Financial Disclosures by Clinical Investigators) . Also addressed are key FDA statutes involved in the regulation of clinical trials Title 21 part 312 (Investigational New Drug Application), Tile 21 part 812 (Investigational Device Exemptions) and Title 21 part 11(Electronic Records and Electronic Signatures). The CIP exam covers material based not only on these regulations but also on guidances issued by OHRP and the FDA. Special attention has been devoted to material covered in these guidances. Also addressed are interactions of the IRB with other committees in the institutional environment. Some of the material also covers ICH guidelines for clinical trial management. The workbook is organized in distinct chapters each of which covers one aspect of the regulations or guidances. The multiple choice questions are deliberately designed to instruct on core materials rather offering linguistically ingenious choices. An answer key is provided. The workbook is therefore designed not only to prepare for the CIP examination but also to educate IRB professionals on matters which arise frequently in IRB administration.
