Each of the equations is
derived in the three-

solutions are organized
according to the geometry of

Bessel and Legendre functions are studied and used whenever appropriate throughout the text. The notions of steady-state

Mirror symmetry is a
phenomenon arising in string
theory in which two very
different manifolds give

Download Free Cpt Maths Module Solutions

rise to equivalent physics. Such a correspondence has significant mathematical consequences, the most familiar of which involves the enumeration of holomorphic curves inside complex manifolds by solving

Download Free Cpt Maths Module Solutions

differential equations
obtained from a 'mirror'
geometry. The inclusion of D-
brane states in the
equivalence has led to
further conjectures
involving calibrated
submanifolds of the mirror

pairs and new (conjectural) invariants of complex manifolds: the Gopakumar Vafa invariants. This book aims to give a single, cohesive treatment of mirror symmetry from both the mathematical and physical

viewpoint. Parts 1 and 2 develop the necessary mathematical and physical background ` `from scratch, ' ' and are intended for readers trying to learn across disciplines. The treatment is focussed, developing only

Download Free Cpt Maths Module Solutions

the material most necessary for the task. In Parts 3 and 4 the physical and mathematical proofs of mirror symmetry are given. From the physics side, this means demonstrating that two different physical theories

Download Free Cpt Maths Module Solutions

give isomorphic physics.
Each physical theory can be described geometrically, and thus mirror symmetry gives rise to a 'pairing' of geometries. The proof involves applying $R \rightarrow 1/R$

circle duality to the phases of the fields in the gauged linear sigma model. The mathematics proof develops Gromov-Witten theory in the algebraic setting, beginning with the moduli spaces of curves and maps, and uses

Download Free Cpt Maths Module Solutions

localization techniques to show that certain hypergeometric functions encode the Gromov-Witten invariants in genus zero, as is predicted by mirror symmetry. Part 5 is devoted to advanced topics in mirror

symmetry, including the role of D-branes in the context of mirror symmetry, and some of their applications in physics and mathematics: topological strings and large N Chern-Simons theory; geometric

engineering; mirror symmetry at higher genus; Gopakumar-Vafa invariants; and Kontsevich's formulation of the mirror phenomenon as an equivalence of categories. This book grew out of an intense, month-long course

on mirror symmetry at Pine Manor College, sponsored by the Clay Mathematics Institute. The lecturers have tried to summarize this course in a coherent, unified text.
