With the increasing focus on science education, growing attention is being paid to how science is taught. Educators in science and science-related disciplines are recognizing that distance delivery opens up new opportunities for delivering information, providing interactivity, collaborative opportunities and feedback, as well as for increasing access for students. This book presents the guidance of expert science educators from the US and from around the globe. They describe key concepts, delivery modes and emerging technologies, and offer models of practice. The book places particular emphasis on experimentation, lab and field work as they are fundamentally part of the education in most scientific disciplines. Chapters include: * Discipline methodology and teaching strategies in the specific areas of physics, biology, chemistry and earth sciences. * An overview of the important and appropriate learning technologies (ICTs) for each major science. * Best practices for establishing and maintaining a successful course online. * Insights and tips for handling practical components like laboratories and field work. * Coverage of breaking topics, including MOOCs, learning analytics, open educational resources and m-learning. * Strategies for engaging your students online. A companion website presents videos of the contributors sharing additional guidance, virtual labs simulations and various additional resources.

Children in today's world are inundated with information about who to be, what to do and how to live. But what if there was a way to teach children how to manage priorities, focus on goals and be a positive influence on the world around them? The Leader in Meis that programme. It's based on a hugely successful initiative carried out at the A.B. Combs Elementary School in North Carolina. To hear the parents of A. B Combs talk about the school is to be amazed. In 1999, the school debuted a programme that taught The 7 Habits of Highly Effective Peopleto a pilot group of students. The parents reported an incredible change in their children, who blossomed under the programme. By the end of the following year the average end-of-grade scores had leapt from 84 to 94. This book will launch the message onto a much larger platform. Stephen R. Covey takes the 7 Habits, that have already changed the lives of millions of people, and shows how children can use them as they develop. Those habits -- be proactive, begin with the end in mind, put first things first, think win-win, seek to understand and then to be understood, synergize, and sharpen the saw -- are critical skills to learn at a young age and bring incredible results, proving that it's never too early to teach someone how to live well.

Combines artwork with the original text of the classic song that celebrates the joy of the season and the warmth of family togetherness.

Provide parents with Strong Character coaching guidelines to help their child improve their life skills

Presents a multifaceted model of understanding, which is based on the premise that people can demonstrate understanding in a variety of ways.

In this book Peterson interprets the history of American schools by placing major educational reformers in the context of their times and relates their thinking to our own era by scrutinizing the often unanticipated consequences of their commitments and ideas. These extraordinary individuals provided the critical ideas and articulated the ideals that motivated many others to search for ways to save the schools from the limitations in which they were embedded: Horace Mann, John Dewey, Martin Luther King, Al Shanker, William Bennett, and James S. Coleman. The drive to centralize was pervasive despite repeatedly expressed reform desire to customize education. Peterson argues that education has become an increasingly labor intensive industry that must reverse direction and become more capital intensive or it will descend in quality. Fortunately, technological change is making it possible radically alter the way in which education services are delivered, providing a new chance to save our schools.

"A 22-volume, highly illustrated, A-Z general encyclopedia for all ages, featuring sections on how to use World Book, other research aids, pronunciation key, a student guide to better writing, speaking, and research skills, and comprehensive index"--

In the 1950s, East Central Florida underwent a vast transformation with the creation of the American space program. The sleepy fishing communities stretching from Titusville to Melbourne became home to an army of engineers, rocket scientists, and technicians who would soon take Florida and the nation into the missile age. With no opportunities for advanced study nearby, a handful of determined men and women launched Brevard Engineering College in 1958. In 1966, Florida's secretary of state approved the college's petition to change its name to Florida Institute of Technology. In its short history, Florida Tech has overcome formidable hurdles and succeeded in winning a place in the top ranks of scientific and technological universities. A college on the rise, Florida Tech has not only a bright future, but a rich and colorful history that has been captured in striking photographs. The exciting story of "Countdown College"-from the lift-off of Bumper 8 in 1950, which launched the space program in Florida, to the most recent high-tech additions to campus facilities-is the subject of this captivating new pictorial history.

Praise for Liberating Learning "Moe and Chubb have delivered a truly stunning book, rich with the prospect of how technology is already revolutionizing learning in communities from Midland, Pennsylvania to Gurgaon, India. At the same time, this is a sobering telling of the realpolitik of education, a battle in which the status quo is well defended. But most of all, this book is a call to action, a call to unleash the power of technological innovation to create an education system worthy of our aspirations and our childrens' dreams." —Ted Mitchell, CEO of the New Schools Venture Fund "As long as we continue to educate students without regard for the way the real world works, we will continue to limit their choices. In Liberating Learning, Terry Moe and John Chubb push us to ask the questions we should be asking, to have the hard conversations about how far technology can go to advance student achievement in this country." —Michelle Rhee, Chancellor of Education for the Washington, D.C. schools "A brilliant analysis of how technology is destined to transform America's schools for the better: not simply by generating new ways of learning, but also—and surprisingly—by unleashing forces that weaken its political opponents and open up the political process to educational change. A provocative, entirely novel vision of the future of American education." —Rick Hanushek, the Paul and Jean Hanna Senior Fellow at the Hoover Institution, Stanford University "Terry Moe and John Chubb, two long-time, astute observers of educational reform, see technology as the way to reverse decades of failed efforts. Technology will facilitate significantly more individualized student learning—and perhaps most importantly, technology will make it harder and harder for the entrenched adult interests to block the reforms that are right for our kids. This is a provocative, informative and, ultimately, optimistic read, something we badly need in public education." —Joel Klein, Chancellor of the New York City schools
