Addresses three points: what has been the extent of ETI's by nonfederal public employee pension plans, in terms of the amounts invested and the types of investments; did ETI programs aimed at business development realize competitive returns; and what were the economic effects of business development ETI programs, such as jobs created. 18 charts and tables.

This dissertation continues existing scholarship by looking into how retirement system reforms, market changes and political institutions have shaped public retirement plan outcomes across the country over the past decade. After a brief introduction, this analysis begins in Chapter 2 by considering how pension benefit changes are

reshaping human capital commitment. By analyzing both administrative and original survey data, this study finds that during times of pension reform and benefit cutback there is an increase of both actual turnover and the intent to leave the organization. The latter is especially true for individuals who do not believe that the pension changes were fair to all members and those with middle-income household earnings. Chapter 3 investigates how public pension managers adjust equity allocations over time. By applying a life-cycle framework of investing, this study finds that pension systems with higher ratios of actives to retirees are more likely to invest in riskier equities. However, after the onset of the market contraction in 2008, the total share of equity investments fell as plans assumed less risky portfolios. Chapter 4 investigates how gubernatorial power differences influence state government pension

contributions. By using a formal gubernatorial power index, this study shows that states with greater governor budgetary power tend to make higher pension contributions. This is also the case with governors who have greater appointment power, veto power, and party control. Taken together, the three essays of this dissertation contribute to a better understanding of the effects that the turbulent times surrounding the Great Recession had on public retirement plans. The findings of these studies are important in light of the need to design and sustain fiscally responsible pension plans while keeping promises to government employees and providing incentives for qualified candidates to enter the public workforce.

People covered by public pensions are often the subject of 'pension envy:' that is, their benefits might seem more generous and their contributions lower than those offered by the private sector. Yet this book points out that such judgments are often inaccurate, since civil servants hold jobs with few counterparts in private industry, such as firefighters, police, judges, and teachers. Often these are riskier, dirtier, and demand more loyalty and discretion than would be required of a more mobile labor force in the private sector. The debate challenges traditional ideas about how the public employee labor contract is structured and raises questions about how such employees are attracted to the public sector, retained and motivated on the job, and retired, via an entire compensation package of

wages and benefits. Authors explore aspects of these schemes, addressing the cost and valuation debate, along with the political economy of how public pension asset pools are perceived and managed, an increasingly important topic in times of global financial turmoil. The discussion also explores ways that public pensions can be strengthened in the US, Japan, Canada, and Germany. The volume captures a vigorous debate currently underway by academics, financial experts, regulators, and plan sponsors, all seeking to define a new future for public retirement systems. It will be of substantial interest to a wide range of readers, since public sector employees and their representatives will naturally find the comparisons and arguments over valuation of keen interest. Public pension administrators and policymakers seeking an explanation of what makes these plans so costly will gain a new

understanding of how the arguments stack up. Private sector employers and plan sponsors can learn much from efforts to reform these retirement systems in states and countries around the world. Finally, investors and the taxpaying public more generally may be at risk to cover these long-term promises, so it behoves them to pay close attention to the financing and investment practices of these plans, along with their valuation. This volume represents an invaluable addition to the Pension Research Council / Oxford University Press series as it includes actuarial, economic, and financial perspectives making it useful for academics, retirement plan administrators, and public employees wishing to understand the challenges facing public pensions.
