Mathematics of Investment and Credit is a leading textbook covering the topic of interest theory. It is the required or recommended text in many college and university courses on this topic, as well as for Exam FM. This text provides a thorough treatment of the theory of interest, and its application to a wide variety of financial instruments. It emphasizes a direct-calculation approach to reaching numerical results, and uses a gentle, thorough pedagogic style. This text includes detailed treatments of the term structure of interest rates, forward contracts of various types, interest rate swaps, financial options, and option strategies. Key formulas and definitions are highlighted. Real world current events are included to demonstrate key concepts. The text contains a large number of worked examples and end-of-chapter exercises. The New Sixth Edition includes updates driven by the upcoming changes for the learning objectives for Exam FM, updated examples and exercises and some exposition improvements. The topic of duration has been revamped in Chapter 7 and expanded treatment of determinants of interest rates in Chapter 8.

The purpose of this book is to help you learn how to manage your money to derive the maximum benefit from what you earn. Mixing investment instruments and capital markets with the theoretical detail on evaluating investments and opportunities to satisfy risk-return objectives along with how investment practice and theory is influenced by globalization leaves readers with the mindset on investments to serve them well. The material is intended to be rigorous and empirical yet not overly quantitative. We continue with unparalleled international coverage, newly rewritten and reorganized derivatives material to be more intuitive and clearer, three additional chapters on derivatives pricing for those who want more detail, rewritten material on multifactor models of risk and return, and new CFA problems for more practice on computations concerning investment decisions. To manage money and investments, one needs to learn about investment alternatives and develop a way of analyzing and thinking about investments that will be of benefit and allow a foundation as new tools and investment opportunities become available. Reilly/Brown provide the best foundation, used extensively by professionals, organizations, and schools across the country. A great source for those with both a theoretical and practical need for investment expertise.

A collection of essays by twenty-three of Canada's leading economic geographers, Canada and the Global Economy is a comprehensive study of the evolving economic and geographic patterns of Canadian development. It provides a benchmark for research on the spatial development of the Canadian economy. The contributors explore four central themes: the locational impacts of the openness of the Canadian economy, Canada's relatively simple economic geography in terms of regional variations in resources and urban development, the problems of keeping pace with rapid advances in technology, and the role of government in maintaining a national market and assisting economic development. They outline the essential elements of Canada's contemporary economic geography and highlight the origins and spatial imprint of change in the Canadian economy; in particular they provide an assessment of Canada's participation in significant international patterns of economic change. Canada and the Global Economy is concerned not only with the economic size and location of consumption and production but also with institutional changes and shifts in employment, the sectoral composition of economic activity, and the organizational structure and locational behaviour of particular industries and firms. Special attention is given to the technological development of both established industries and new service and manufacturing activities. A timely addition to the field, it provides a geographic perspective on significant changes in jobs and types of work that result from the transformation of economic activities.
