The Wide Range Achievement Test, known as the " WRAT ", is a norm-referenced screening test used to measure basic academic skills that are needed for effective learning, communication and thinking. It is commonly used when screening to diagnose for learning disabilities in reading, spelling and arithmetic.

Test designed to provide a diagnostic assessment of reading, spelling and arithmetic in persons of all ages.

This comprehensive professional manual contains all of the information needed to administer, score, and interpret the WRAT4; background information about the development of the battery; and technical characteristics of the test, including evidence of reliability and validity.--page 5.

Introductory texts on psychological testing and evaluation historically are not in short supply. Typically, however, such texts have been relatively superficial in their discussion of clinical material and have focused primarily on the theoretical and psychometric properties of indivi dual tests. More practical, clinically relevant presentations of psychological instruments have been confined to individual volumes with advanced and often very technical information geared to the more sophisticated user. Professors in introductory graduate courses are often forced to adopt several advanced texts to cover the material, at the same time helping students wade through unnecessary technical information in order to provide a basic working knowl edge of each test. Understanding Psychological Assessment is an attempt to address these concerns. It brings together into a single volume a broad sampling of the most respected instruments in the psychologist's armamentarium along with promising new tests of cognitive, vocational, and personality functioning. Additionally, it presents the most updated versions of these tests, all in a practical, clearly written format that covers the development, psychometrics, administra tive considerations, and interpretive hypotheses for each instrument. Clinical case studies allow the reader to apply the interpretive guidelines to real clinical data, thereby reinforcing basic understanding of the instrument and helping to insure that both the student and practi tioner can actually begin to use the test. Understanding Psychological Assessment includes cognitive and personality tests for adults, children, and adolescents, as well as chapters on the theory of psychological measurement and integrated report writing.

Psychologists, researchers, teachers, and students need complete and comprehensive information in the fields of psychology and behavioral science. The Corsini Encyclopedia of Psychology, Volume Four has been the reference of choice for almost three decades. This indispensable resource is updated and expanded to include much new material. It uniquely and effectively blends psychology and behavioral science. The Fourth Edition features over 1,200 entries; complete coverage of DSM disorders; and a bibliography of over 10,000 citations. Readers will benefit from up-to-date and authoritative coverage of every major area of psychology.

Pediatric Life Care Planning and Case Management provides a comprehensive and unique reference that goes beyond the clinical discussion to include legal and financial aspects, life expectancy data, and assistive technology. It also includes case samples of actual plans related to specific conditions. The book is divided into five parts: Normal Growth and Development of Children describes the normal growth and development and the cognitive and psychosocial development of children. The Roles of the Life Care Plan Team details the roles of members of a life care plan team, from the pediatric care manager and life care planner to the vocational rehabilitation consultant, among others. Chronic Conditions and Disability States offers guidelines for life care planning for children with a wide range of chronic health conditions and disabilities, including traumatic injuries and organ transplants. Forensic Considerations examines life care planning in legal cases, life expectancy issues, and life care plan foundation strategies and requirements. Special Issues discusses assistive technology, medical homes, funding sources, and ethical issues in caring for children with special needs—including a mother ' s perspective on caring for her son. With contributions from highly respected professionals, this text provides a guide for life care planners, health-care professionals, education specialists, insurance decision makers, attorneys, and families who work with children with special health-care needs.

Since the original publication of Traumatic Brain Injury: Methods for Clinical & Forensic Neuropsychiatric Assessment, enhanced clinical findings concerning traumatic brain injury have improved our ability to evaluate and treat individuals with TBI. Unfortunately, the dramatic rise in the occurrence of brain injuries over the same time period d

A one-of-a-kind resource for evaluators using the Woodcock-Johnson® III The Woodcock-Johnson® III is one of the most widely used instruments for assessing both cognitive abilities and achievement in children and adolescents. Woodcock-Johnson® III: Reports, Recommendations, and Strategies is the only reference to provide valuable guidelines for preparing useful recommendations and writing effective, descriptive psychological and educational reports based on WJ III® scores, tasks analysis, and error patterns. Featuring the most up-to-date information available on the WJ III®, this essential resource offers an overview of the WJ III® scores and interpretive information, along with a review of the clusters, and tests. Numerous examples of diagnostic reports that depict a variety of common student learning problems are included, illustrating applications of the WJ III® in both educational and clinical settings. Drs. Nancy Mather and Lynne Jaffe also provide a wide variety of educational recommendations, along with summaries of proven methods and techniques for implementing successful examiner recommendations, which can essily be attached to a report. WJ III® examiners will find this volume invaluable in preparing psychoeducational reports about children's abilities, and teachers and educational therapists will find it helpful in converting recommendations into measurable goals and objectives for monitoring students' progress.

The current research investigated the relationship between the WRAT-4 and WASI in males over 40. 61 participants, predominantly Caucasian, ages 42 to 90 (M = 63.33, SD = 12.56), participated. It was hypothesized that there would be strong positive correlations between the WRAT-4 and WASI and depressed individuals would perform more poorly on both measures. A 2 (order of administration) x 2 (type of test) mixed ANCOVA used depression (as measured by the Beck Depression Inventory 2 nd Edition) as a covariate and showed participants who completed the WASI first did not perform as well as participants who completed the WRAT-4 first. A 3 (test score) x 2 (depression level) mixed ANOVA was also utilized. Both hypotheses were confirmed.
